If you are copying games or other content, follow the steps above, but use the appropriate destination folder for the type of content you are moving.

✓ **Monitoring Memory Space**

Your device contains a limited amount of internal memory. It is recommended that in order to use as many files as you can with your device you save them to an SD card.

✓ **Troubleshooting Special Characters**

When using imported dictionaries that contain accents, umlauts or other diacritics, you might find that they are missing when you open the imported dictionary on your device. This might be because your Windows language setting is correct. To check or correct your Windows language setting, follow these steps:

1. **Close all open Microsoft Office applications, if necessary.**
2. **Click "Start" | "Control Panel".**
3. **Double-click "Regional and Language Options".**
4. **Click on the "Advanced" tab of the dialog box.**
5. **Check the setting in the top portion of the dialog box: "Language for non-Unicode programs".**
   This option must be set to one of the supported languages: English, French, Italian, German or Spanish. It is preferred to use the setting for the home country of the language if there is a choice.
6. **Click "OK".**
